Nine Mile

"Combining tradition and science to re-imagine the merino."

Nine Mile Poll Merino Stud was founded in 1998 based on Nine Mile ewes of Bendigo bloodlines. It was founded on the basis that it was time to re-imagine the merino. Since the stud's inception, Gordon, Jayne and the team at Nine Mile have been striving to breed a unique sheep that will be profitable across large tracts of the South Island. We have focussed on maximising the earning potential of the sheep across wool, lambs and surplus sheep sales.

In addition to providing the right rams for the Nine Mile commercial flock the stud aims to supply high quality merino genetics to innovative commercial producers. Nine Mile aims to produce elite Merino genetics that:

- Grow 17 micron wool that is white, bright, waterproof and stylish
- Are capable of weaning over 140% of lambs to ewes mated
- Grow rapidly as lambs and mature early allowing pre-winter turnoff
- Maintain health and body condition when grazed on hill country
- Are free of skin wrinkle and have clean points

We are proud of the commercial performance that the sheep achieve both on our clients properties as well as on Nine Mile itself.

For the past 14 years, all animals have been performance tested and evaluated using the Australian organisation, Sheep Genetics. This system provides estimated breeding values (EBVs) on every stud sheep at Nine Mile. Over these 14 years we have carefully combined the visual assessment of the wool and physical structure with the performance data to breed a functional and productive animal. This enhanced accuracy of selection has enabled us to make consistent genetic gain across the traits we are focussing on.

Nine Mile was one of the first merino studs in the world to start to actively select for animals with improved muscling and fatness using EBVs. A strong emphasis has been placed on these traits (YEMD & YFAT) since 2004. Research has clearly shown that these traits are closely associated with ewe condition score.

The genetic gain we have made in these traits means that our animals are now more able to handle nutritional stress and better able to reproduce than the average merino. This positive selection for muscling helps us to breed the carcass shape required by the trade as well as early maturing ewes that don't grow out to enormous weights as adults. Along the way we have discovered other benefits of this selection strategy including enhanced resistance to worms. We have discovered that positive selection for muscle and fat is a great way to take costs out of high-country sheep farming.

At Nine Mile we are always searching for new bloodlines that can help us make the boat go faster. Over the years we have introduced genetics from most of the high performing studs in Australia. We will continue with this practice to ensure we continue to evolve the Nine Mile merino to maximise the value of wool, lambs and surplus sheep sales.

2025 Nine Mile Auction Ram EBV Average

SM	PWT	YWT	YEMD	YFAT	YCFW	YFD	WR	YWEC	LDAG	FR
143	6.3	8.6	1.7	0.8	10.5	-1.8	21%	-22.1	-0.22	0.03

Description of EBVs provided in the catalogue

- PWT**Weight at 200 days of age, great if you are selling store or finishing pre-winter
- YWT**Weight at 1 year old, the growth trait to use if you are wintering your wethers
- YEMD**Genetic muscling, used to enhance: ewe body condition, early maturity, lamb carcass shape
- YFAT**Genetic fat, used to enhance: ewe doing ability and scanning and lamb survival
- YFD**Micron, use this EBV to select the right micron for your market
- YCFW**Fleece weight, quoted as a %, the higher the number the more they cut
- YWEC**Worm egg count. Rams with more negative egg counts produce lambs who have a higher genetic potential to resist worm burdens.
- WR**The higher the rams weaning rate (WR) the greater the daughters potential is to be highly reproductive.
- LDAG**Late dag score. The lower the rams dag score the less daggy the offspring will be.
- FR**Footrot. The lower the footrot score the higher the tolerance to footrot.
- SM**Sustainable Merino.
Summary of Sustainable Merino index:
 - The Sustainable Merino index is based on a production system where the income from sheepmeat production and the wool clip are reasonably balanced.
 - The index focuses on genetic improvement offlleece weight, growth and lean meat yield and reproduction.
 - Emphasis on reduced wrinkle, dag and worm egg count is also included.
